Test Scenarios

Feature: – Page Registration

As a visitor
I want to be able to register in the website
So that I can Vote for a Sport Car

// Acceptance Criteria
1. User password needs to be set with minimum 8 characters (1 Uppercase + 1 lowercase + 1 special character)
2. If the registration is successful a message should be displayed
3. The application should validate a visitor can only register once. //

1
Scenario: Successful Registration

Given I am on Buggy cars rating homepage

When I click on Register link button
And Enter input values as
| Login | First Name | Last Name | Password | Confirm Password |
| Test@1 | Test | scenario1 | Test@10 | Test@10 |

Then Message is Displayed "Registration is Successful"

2
Scenario: Password less than 8 characters

Given I am on a Registration Page

When I entered password with length less than 8 characters

Then Error Message should be displayed "InvalidParameter: 1 validation error(s) found. - minimum field size of 8, SignUpInput.Password"

3

Scenario: Password with no special character

Given I am on a Registration Page

When I entered password with no special characters

Then Error Message should be displayed "InvalidPasswordException: Password did not conform with policy: Password must have atleast 1 special characters"

4
Scenario: Password with no Uppercase character

Given I am on a Registration Page

When I entered password with no Uppercase character

Then Error Message should be displayed "InvalidPasswordException: Password did not conform with policy: Password must have uppercase characters"

5
Scenario: Password with no Lowercase character

Given I am on a Registration Page

When I entered password with no Lowercase character

Then Error Message should be displayed" InvalidPasswordException: Password did not conform with policy: Password must have lowercase characters"

6
Scenario: User attempts to register with login already registered

Given I am on a Registration Page

When I input login with values already registered

Then Error message should be displayed "UsernameExistsException: User already exists"

7
Scenario: Login with Valid Credentials

Given User with valid credentials
When User logs into the application
Then User should be successfully logged in

8
Scenario: Login with In-valid Credentials

Given User with Invalid Credentials
When User Logs into the application
Then User should not be able to Login

9
Scenario: Vote are counted

Given I navigate to my favorite sport car
When I click on Vote button
Then My vote should be successfully sent.

Scenario: Log out

Given I am logged into the application
When I click on Logout button
Then User is successfully Logged out
